How to Determine the OS and Bit Version of your current OS (operating system)

Windows 8 all versions

The above screen was displayed after using the magnifying glass icon to search for “This PC” once the item is displayed in Windows 8 Right Click the program and select properties. The above screen will be displayed.

Note: The text in the top center portion identifies this system as being: Windows 8.1 Enterprise

Below that in the System area there is a section for System type in the case of the above it is 64-Bit.

Selecting software for this system would be normally shown as Windows x64 for Windows Vista, 7,8, or 12
Windows 7 all versions

The above screen was displayed after right clicking the test Computer from the Start Menu. The above screen will be displayed.

**Note:** The text in the top center portion identifies this system as being: Windows 7 Professional

Below that in the System area there is a section for System type in the case of the above it is 64-Bit.

Selecting software for this system would be normally shown as Windows x64 for Windows Vista, 7, 8, or 12

If your system is of System Type: 32 Bit you should select software marked as Windows x86 for Windows Vista, 7, 8, or 12
